enough.

Take DealerSocket
everywhere with the
mobile app.

DealerSocket Mobile Application

Allowing you to take a customer everywhere you go.

What is the DealerSocket Mobile App?

Well, where do we begin? Desktop computers have come a long way in the last few decades and so has mobile software. The DealerSocket mobile application provides the core functionality of DealerSocket to be carried with you where ever you go.

Why would I need it?

You need it because not all staff enjoy sitting at a desk all day. Take your mobile device out onto the showroom floor and capture those customer details on the spot. For those people in the sales team who occasionally forget to call a customer, install the free application on their mobile phone and they can access all customer details 24/7. Or even better, access and update calendar appointments and information right from your tablet or mobile. The benefits of taking your CRM software everywhere you go will help you overcome any sales hurdle which might be limiting your dealership performance. This includes checking all inventory on the lot to ensure you've got the right vehicle for the customer.

From a Dealer Principal or Sales Manager perspective, regardless of your location, albeit on leave or an off-site meeting you can easily access the Sales Dashboard to check the performance of your teams. Choose from the previous month or the current day performance, you can view all the sales in detail right from your pocket in one quick glance.

Tell me more.

You really need to use the application to appreciate all the features. Push notifications for events you create will ensure you'll stay on top of day-to-day activities where ever you go. Spend more time with your customers and less time at a desk using the DealerSocket mobile application.
