

**Double keying  
information frustrates  
us.**

**Our Parts Ordering  
solution is all about  
improving efficiency.**

# Parts Ordering

Removing double keying from the parts order process.

## What is Parts Ordering?

Parts Ordering allows a dealership to transfer a parts order to the PC for upload into the manufacturer system. Orders are placed directly into the manufacturer system without the need to double handle data.

## How does it work?

The existing process for ordering parts from the manufacturer into the business involves taking a list and re-keying the information into the manufacturers system. This can sometimes take hours.

Your parts order, which play a part in the customer satisfaction and retention rate of your business needs to be accurate and precise the first time, every time. Parts Ordering takes exactly what you wish to order and sends it directly and instantly to the manufacturer.

Having the right parts is one step closer to reducing the profit leakage component of your business revenue. Accurate part orders means less time solving issues around incorrect parts.

## Tell me more.

Increasing efficiencies is not always an easy process however, Parts Ordering takes the unnecessary steps out of the job. Ordering parts can be done in a minute with accuracy, instead of taking longer with a high chance of human error.
