

**No need to double key  
data with this solution.**

**Parts Receipting brings  
stock into your business  
more efficiently.**

# Parts Receipting

Automatically receiving parts right into your DMS.

## What is Parts Receipting?

It's the solution which will save you time on a daily basis. How? Through improving the efficiency of entering parts into your Dealer Management System that have come into stock.

## How does it work?

Parts Receipting provides the dealer the ability to automatically receipt parts invoices from the factory, directly into the DMS. This streamlined process eliminates the need to manually enter parts information including pricing, providing a greater accuracy for inventory management which will come in handy at the time of any stock take.

Streamlining process and increasing efficiency are the key elements to this product. The time saved by using Parts Receipting can be spent elsewhere to further enhance business revenue and growth.

## What else do I need to know?

Through the increase of the efficiency of stock processing and accuracy in parts management, you'll reduce stock take costs and errors as data will now be entered correctly and in real time.

The integration works with many OEM's and we have developed Parts Receipting with this in mind. All of the parts you received today can be completely received into your business in the same time it takes to read this flyer.
